(a) 1500 steps: no curriculum (left) vs curriculum (right)
raw: the chance-level seed is removed, the level is not
normalized: the mean rises, the spread explodes
Kaczmarz: nothing happens
chance 1/64
MQAR accuracy
raw k, $\beta = 1$
normalized k, $\beta = 1$
Kaczmarz
(b) Budget: the curriculum's advantage is a short-budget effect
Kaczmarz, 1500 (0.9372)
Kaczmarz, 3000 (0.9461)
0.1919
0.4313
0.6481
0.9232
no curriculum, 1500
curriculum, 1500
